Metals—Gold, Silver, Nickel, Copper, Lead, Zinc, Pech—Coal, Petroleum, Natural Gas. Non-Metals—Asbestos, Gypsum, Feldspar, Salt. Structural Materials—Cement, Clay Products, Lime...	20	List of Current Publications of the Dominion Bureau of Statistics.....	35
Table 16. Weekly Factors of Economic Activity in Canada.			
Grain Receipts and Prices, Live Stock Sales and Prices, Carloadings, Common Stock Prices, Mining Stock Prices.....	21		

# MONTHLY REVIEW OF BUSINESS STATISTICS

Vol. X

OTTAWA, JANUARY, 1935

No. 1

DOMINION STATISTICIAN: R. H. COATS, LL.D., F.S.S. (Hon.), F.R.S.C.

CHIEF, BRANCH OF GENERAL STATISTICS: S. A. CUDMORE, M.A., F.S.S.

BUSINESS STATISTICIAN: SYDNEY B. SMITH, M.A.

## THE CURRENT ECONOMIC SITUATION IN CANADA

Economic conditions in Canada showed improvement in 1934, adding to the advance recorded in the greater part of the preceding year. Most of the principal factors measuring the trend of economic activity were consequently much more favourable than during the low point of the depression reached in 1932 and the first quarter of 1933. The improvement was well defined during the first part of the year just ended, many factors reflecting a process of consolidation during the later months. The physical volume of business at the dawn of the new year was about equivalent to that of the later part of 1931.

The level of business operations in the last half of 1934 was of course far below that of 1928 or 1929. The result was that large numbers of the increasing active population remained unemployed, and many plants were either idle or operated at a point far below capacity levels.

A feature of the year was the advance in high-grade bond prices to the maximum point since the pre-war period. Wholesale prices remained stable at a level somewhat higher than that of 1933. After considerable fluctuation, common stock prices were slightly higher at the end of the year than at the beginning. The average of the official index for the twelve months ended December was 24.9 per cent greater than the average for 1933. Trading on the Montreal and Toronto stock exchanges was inactive as compared with the preceding year.

### Forestry

Activity in the forestry group was greater than in any year since 1930. Following the marked gain culminating in August, 1933, some further expansion was shown before the end of 1934. While the price of newsprint remained at depression levels, the output showed a marked gain of 28 per cent. The production in the first eleven months was 2,358,000 tons compared with 1,841,700. The output of 1934 was second only to that of 1929.

An active export trade was transacted in planks and boards, the outward movement in the first eleven months being 1,269,000,000 feet, a gain of 38.2 per cent over the same period of 1933. The export movement was greater than in any year since 1930. Employment in the logging industry was at a high point on the latest date, indicating preparations to supply an expanding market.

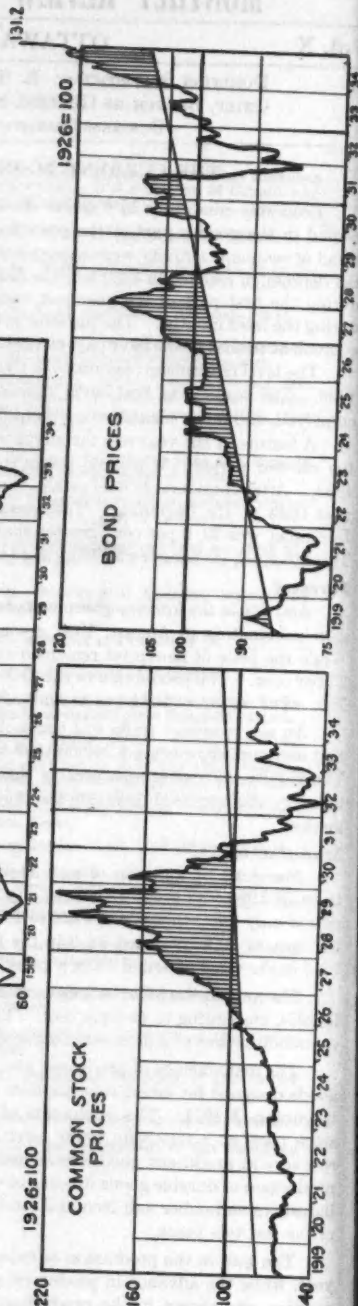

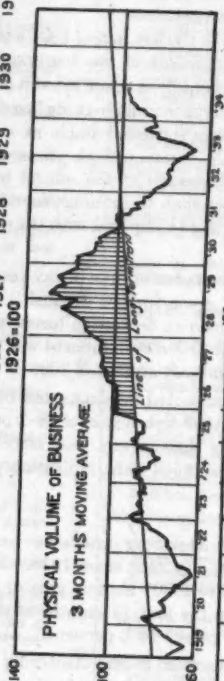

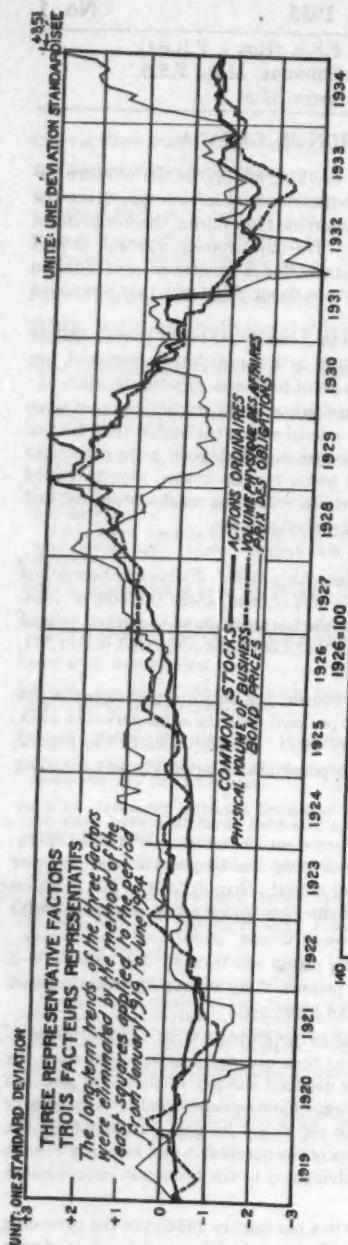

### Manufacturing

Measured by an index of manufacturing production based on 29 factors, the level of operations in 1934 was greater than in any year since 1930. During the 16 years in the post-war period only five—those from 1926 to 1930—showed greater activity than in 1934. The index on the base of 1926 averaged 93.6 in the first 11 months of the year under review compared with 79.1 in the same period of 1933, a gain of 18.3 per cent.

The gain in the index of employment in manufacturing plants was from 80.9 in 1933 to 90.3 in 1934, amounting to 11.6 per cent. The advance in the prices of fully and chiefly manufactured commodities was of a moderate character, being limited to 4.9 per cent.

The manufacture of producers' goods normally fluctuates more widely than the production of goods designed for direct consumption. The disparity has been especially pronounced since the beginning of 1931. The production of producers' goods declined sharply in that year and has since been at a relatively lower level than the production of consumers' goods. The greater recovery in producers' goods in the last two years has not yet closed the gap. Inactivity in the production of durable goods was one of the essential factors of the depression and recovery in such industries as lumber and iron and steel was a major contribution to the economic improvement of the last two years.

The gain in the production of consumers' goods was 9.4 per cent in 1934 over the preceding year, while the advance in producers' goods was computed at nearly 30 per cent. A moderate reaction was shown in the production of producers' goods in the later months of 1934. The advance in the production of consumers' goods, on the other hand, was practically continuous during the year.

### Iron and Steel Industry

An excellent barometer of activity in the group engaged in the production of plant and equipment is the output of iron and steel. The uses of iron and steel are fairly general in the production and renewal of railway and industrial equipment, explaining the strategic position occupied by the industry in reflecting cyclical fluctuations. For the first eleven months of 1934, the production of pig iron amounted to 364,631 long tons compared with 190,464 in the same period of 1933, a gain of 91.4 per cent. The output of steel ingots at 700,187 long tons recorded an increase of 95.4 per cent.

The index of steel production at 98.0 was greater than in any year since 1930, while pig iron production recorded a gain over 1932 and 1933.

Imports of iron and steel products during the first eleven months at \$86,750,000 showed a gain of 56.3 per cent over 1933.

### Automobile Production

Fluctuations in the automobile industry are known to correspond in general with the trend of purchasing power. A high level of purchasing power leads to expansion in sales, while the lack of effective demand such as occurs in a time of depression results in drastic curtailment. The expansion in the use of motor car was one of the striking features of the decade following the war, exerting a powerful influence on productive capacity. The widespread use of the motor car in Canada was indicated by the registration of nearly 1,083,000 cars in 1933.

The output of automobiles during the first 11 months of 1934 was 114,158, being a gain of 82.2 per cent over the same period of 1933. The expansion in the production of automobiles has reinforced the prosperity of other industries engaged in the manufacture of raw materials and accessories. The tire and petroleum refining industries had been adversely affected by the depression, but the expansion in motor car production in 1934 had a beneficial effect upon demand for such products. The imports of crude rubber at 57,321,000 pounds in the first 11 months of 1934 showed a gain of nearly 46 per cent over the same period of 1933. The gain in the imports of crude petroleum, indicating conditions in the oil industry, at 1,027,500,000 gallons showed a gain of 15.5 per cent.

### Construction

The records of the construction industry are generally regarded as being of great value for barometric purposes. During a time of depression the existing plant and equipment, generally speaking, is more than sufficient to meet current demands for industrial products. Once the fixed capital equipment is again operated at a high percentage of capacity corresponding to the state of affairs in the preceding period of maximum prosperity, the construction industry immediately acquires additional momentum. The high level of operations from 1927 to 1929, as shown by the value of contracts awarded being in excess of \$400,000,000 per year, is a fitting commentary upon the correlation of the industry with economic progress. The decline in construction from 1929 to 1933 coincided with the recurrence of a major depression.

While contracts awarded at \$125,812,000 showed a gain of 29.3 p. c. over the preceding year, the new business obtained by the industry was at a low level compared with the years from 1923 to 1929. Building permits in the first eleven months were \$24,300,000 compared with \$19,793,000 in the same months of 1933, a gain of nearly 23 p. c.

### Hydro Electric Power

Although no new large water power undertakings were initiated in 1934, work was continued on several developments already under construction. As a result net new installations of about 214,965 horse power were brought into operation during the year. The total installations for the Dominion at the end of 1934 was consequently 7,547,000 horse power. The increase in installation during 1934 was due mainly to the completion of the Rapide Blanc development of the Shawinigan Water and Power Co., on the St. Maurice river and to the installation of an additional unit by the Beauharnois Light, Heat and Power Co. Other installations of lesser importance were completed in British Columbia, Ontario and Nova Scotia.

The output of electric power in the first eleven months of 1934 was 19,089,000,000 kilowatt hours, a gain of 20.5 p. c. over the same months of the preceding year. The increase over 1930, the previous maximum, was about 17 p. c.

Even after deduction of exports and deliveries to electric boilers, the output of the first

eleven months of 1934 reached a new high point in the history of the industry, the gain over 1930 after these deductions being about 3.5 p. c. The gain in output during 1934 was general, being most pronounced in the province of Quebec.

#### Mineral Production

The value of mineral production in 1934 surpassed not only the preceding year but with the exception of 1929 and 1930 exceeded all other years in the history of the industry. The estimated value was \$278,337,000 in 1934, an increase of 26 p. c. over the production of \$221,495,000 in the preceding year. The most striking increases were found among the metals, where several new high records of production were established. The value of the Canadian gold output was greater than ever before, the total in Canadian funds being \$102,242,000 compared with \$84,350,000 in the preceding year. The price averaged \$34.49 per fine ounce against \$28.60 in 1933.

Copper output at 367,000,000 pounds was a record, exceeding 1930, the previous high year by 21 p. c. The value of the year's production totalled \$26,881,000 against a value of \$37,948,000 in 1930.

The output of nickel was 130,346,000 pounds, an increase of 56 p. c. over 1933 and 18 p. c. over 1929, the previous record year. Lead production established a record at 342,811,000 pounds, showing an increase of 29 p. c. over 1933. The output of zinc at 300,747,000 pounds was 51 p. c. greater than in 1933 and 12 p. c. over 1930, the previous maximum.

Coal production was 13,891,000 long tons, a gain of 16.7 p. c. over the 11,903,000 produced in 1933. The output of cement was valued at \$5,729,000 compared with \$4,537,000.

#### The Agricultural Situation

One of the chief factors operating to expand or contract industrial enterprise is the production and value of the principal farm crops. In a country such as Canada where agriculture occupies a large place among the economic activities of the nation, the crop yield cannot but affect the general trend of business. The wheat crop was only slightly above that of 1933, the yield per acre being 11.5 bushels compared with 10.4. Owing to the considerably higher price, the gain in the value of the wheat crop was of appreciable proportions, the total being \$159,455,000 compared with \$122,864,000.

The preliminary estimate of the value of field crops in 1934 at \$536,498,600 showed a gain of \$112,902,000 over the valuation for 1933. The higher level was mainly due to increases of \$37 million in hay and clover; \$36½ million in wheat; \$31 million in oats and \$10½ million in barley.

Country deliveries of wheat from August 1 to November 30, 1934, amounted to 161 million bushels compared with 151 million bushels during the same period of the preceding year. Stocks of Canadian wheat in store in all positions on Dec. 28, 1934, were 258 million bushels as compared with 242 million bushels on the same date of 1933. Exports of Canadian wheat were 73 million bushels during the four months from August to November compared with 75 million for the same months of the preceding year. The average cash price of No. 1 Northern wheat at Winnipeg was 81.5 cents per bushel from August to November, 1934, compared with 66.3 cents in the corresponding period of 1933, a gain of 23 p. c.

#### Railways and Shipping

Appreciable gain was shown in the revenue freight handled by the railways of Canada during 1934. The increase in the freight movement was nearly 15 p. c., total loadings being about 2,320,000 cars against 2,032,000 in 1933. A considerable increase was also shown over 1932. Loadings of grain and coke were lighter than in 1933, but each of the other commodity groups in the official classification recorded advances.

The gain in gross operating revenues on the Canadian lines of the Canadian National over the first 11 months of 1933 was 11.5 p. c., while the Canadian Pacific recorded an increase of 10.4 p. c. in the same comparison.

The aggregate cargo tonnage of five ports of Canada, namely, Halifax, Saint John, Quebec, Toronto and Vancouver was 11,626,000 tons in the first ten months of 1934 compared with 10,758,000 tons in the same period of 1933, an increase of 8 p. c.

#### External Trade

The pronounced gain in external trade was a feature of the economic betterment of the year. The total exports of Canadian merchandise in the first eleven months of 1934 were \$592,000,000 compared with \$481,000,000 in its predecessor, an increase of \$111,000,000 or 23.1 p. c. Exports of coin and bullion not included with merchandise exports also scored a remarkable advance due in the main to the higher prices secured for gold bullion.

The value of imports advanced from \$365,800,000 in the eleven-month period to \$474,400,000, a gain of no less than 29·7 p. c. The favourable balance of trade, taking no account of the outward shipment of new gold bullion, was \$124,100,000, an increase of 3·2 p. c. over the same period of 1933.

#### Economic Ratios

For the appraisal of Canada's present position, attention is drawn to five ratios of economic importance extending over the post-war period presented in the chart appearing on page 15. Of these the relationship between the physical volume of business and wholesale prices occupies the premier position. Price fluctuations during the seven years from 1923 to 1929 were of a relatively moderate character, the comparative stability of the price level encouraging business expansion. The price stability of that period contrasts sharply with the rising trend of business operations. The prosperity phase of the secondary post-war cycle was characterized by relative price stability, although the normal development in line with historical precedent would have been a considerable advance in commodity prices. The decided expansion in the volume of productive enterprise was the chief element in the prosperity of the period. Following upon continuous declines between 1929 and 1932, the last two years were characterized by a simultaneous advance in business operations and prices. The greater gain in the physical volume of business resulted at the end of the year in a relatively higher level than for wholesale prices.

#### The Foreign Situation

Measured by information available regarding fifteen important countries, industrial production in Canada showed greater recovery in 1934 than in any other country of the group except Germany and Sweden. The index of industrial production in Canada on the 1928 base averaged 79·7 in the first 11 months of 1934 compared with 64·6 in the same period of the preceding year, a gain of 23·4 p. c. Great Britain, Sweden, Germany and Italy also recorded important gains over last year. France and Belgium were less prosperous and the gain in the Netherlands was slight. The position in Poland was greatly improved, the index moving up 10·4 p. c. The increase in the index of the United States was limited to 2·5 p. c. in this comparison. Most Canadian industries showed relatively greater activity during the available portion of 1934.

Industrial production in France, while fairly well maintained in 1930, has subsequently showed marked decline. An upward trend was recorded in the twelve months ended July, 1933, while further reaction characterized the available portion of 1934. The average of the index of industrial production in 1934 was 78·8 compared with 84·7 in the same period of 1933.

The lowest point of industrial production in Great Britain for recent years was reached in the later months of 1931. Operations were well maintained at a slightly higher level in 1932. An advance was recorded in 1933 and operations during 1934 were at a level corresponding closely with those of 1929. Measured by the index of business activity published by "The Economist," Great Britain has definitely emerged from the worst phases of the depression.

While industrial conditions in the United States showed unmistakable improvement over the levels of 1932 and the first quarter of 1933, the record of the last two years was marred by severe reactions offsetting much of the temporary advance. The index of industrial production transferred to the base of 1928 for purposes of direct comparison, averaged 70·8 in the first eleven months of 1934, only 2·5 p. c. greater than in the same months of 1933.

#### The December Trend

Due in part to the occurrence of five Sundays, industrial production declined in December from the preceding month. The index of industrial production was 91·0 compared with 97·0 in November. The index of mineral production declined due to reduced volume in copper, silver and coal. The index of manufacturing production was 91·8 compared with 96·0. The index of food production based on ten factors dropped from 96·5 to 91·7. A gain was shown in crude rubber imports, and raw wool was imported in greater volume. A slight gain was recorded in the imports of raw cotton before seasonal adjustment. Newsprint, after adjustment, reached a new high point in history. The primary iron and steel industry was more active, and the motor car industry commenced operations on new models. Petroleum imports dropped off sharply. Construction contracts declined, while the output of electric power recorded a sharp expansion. Merchandise imports were at a lower level, while adjusted exports were slightly higher.

DOMINION BUREAU OF STATISTICS, JANUARY 21, 1935.

Table 1. Weighted Indexes of the Physical Volume of Business and Agricultural Factors in Canada, Based on the Monthly Average for 1926 and Corrected where Necessary for Seasonal Variation.<sup>1</sup>

# REVUE MENSUELLE DE LA SITUATION ÉCONOMIQUE

Vol. X

OTTAWA, JANVIER 1935

N° 1

STATISTICIEN DU DOMINION: R. H. COATS, LL.D., F.S.S. (Hon.), F.R.S.C.  
 CHEF DE LA SECTION DE LA STATISTIQUE GÉNÉRALE: S. A. CUDMORE, M.A., F.S.S.  
 STATISTIQUES ÉCONOMIQUES: SYDNEY B. SMITH, M.A.

## STATISTIQUES COURANTES DES AFFAIRES AU CANADA

Les conditions économiques au Canada ont fait preuve d'amélioration en 1934, ajoutant ainsi à l'avance de la plus grande partie de l'année précédente. La plupart des principaux facteurs servant à mesurer l'activité économique ont été plus favorables que pendant la dépression qui a atteint son pire en 1932 et le premier trimestre de 1933. L'amélioration a pris des formes bien distinctes dès le début de la nouvelle année, plusieurs facteurs reflétant un mouvement de consolidation au cours des derniers mois. Le volume physique des affaires à l'aurore de l'année nouvelle est à peu près l'équivalent de ce qu'il était dans la dernière partie de 1931.

Le niveau des opérations commerciales le dernier semestre de 1934 est tout de même beaucoup inférieur à celui de 1928 ou 1929. Comme résultat, une grande proportion de la population active est restée sans emploi et plusieurs usines ont été ou fermées ou exploitées à bas rendement.

Une caractéristique de l'année se trouve dans la forte avance du cours des obligations à leur maximum depuis l'avant-guerre. Les prix de gros sont restés à un niveau assez stable et un peu au-dessus de celui de 1933. Après des fluctuations considérables le cours des actions ordinaires était un peu plus élevé à la fin de l'année qu'au commencement. La moyenne de l'indice officiel des douze mois terminés en décembre est de 24.9 p.c. plus élevée que celle de 1933. Les bourses de Montréal et Toronto ont été moins inactives que l'année précédente.

### Forêts

L'activité dans le groupe des industries forestières a été plus grande qu'en toute année depuis 1930, à la suite du gain d'août 1933 l'expansion s'est continuée jusqu'à la fin de 1934. Bien que le prix du papier à journal soit resté à des niveaux de dépression, la production en volume donne un gain de 28 p.c. La production des onze premiers mois est de 2,358,000 tonnes comparativement à 1,841,700. La production de 1934 ne le cède qu'à celle de 1929.

Les exportations de planches et madriers ont été actives, le mouvement des onze premiers mois portant sur 1,269,000,000 de pieds, un gain de 38.2 p.c. sur la même période de 1933. C'est mieux que toute année depuis 1930. L'emploiement dans l'abatage du bois a été à son maximum dans ces derniers temps, indiquant des préparations pour le ravitaillement d'un marché plus actif.

### Manufactures

Mesuré par l'indice de la production manufacturière basé sur 29 facteurs, le niveau des opérations de 1934 est plus élevé qu'en toute année depuis 1930. Au cours des seize années d'après-guerre celles de 1926 à 1930 ont seules montré une plus grande activité que 1934. L'indice, sur une base de 1926, montre une moyenne de 93.6 les premiers onze mois de l'année sous revue comparativement à 79.1 la même période de 1933, un gain de 18.3 p.c.

L'indice de l'emploiement dans les établissements manufacturiers était à 80.9 en 1933 et à 90.3 en 1934, une avance de 11.6 p.c. L'avance des prix des produits partiellement ou complètement ouverts a été d'un caractère modéré, se limitant à 4.9 p.c.

La production de matières premières ou d'outillage fluctue normalement dans une plus grande marge que la production de denrées destinées à la consommation directe. La disparité a été spécialement prononcée depuis le commencement de 1931. La production d'articles pour les producteurs a reculé vivement au cours de l'année et est restée à un plus bas niveau que celle de marchandises de consommation. Le relèvement des marchandises de production les deux dernières années n'a pas été assez rapide pour combler l'écart. L'inactivité dans la production des articles de longue durée est un des facteurs essentiels de la dépression et le relèvement dans des industries telles que le bois, le fer et l'acier a été une contribution majeure à l'amélioration économique des deux années dernières.

Le gain de la production de marchandises de consommation est de 9.4 p.c. en 1934 et l'avance des marchandises de production a atteint près de 30 p.c. Il y a eu réaction modérée dans celles-ci au cours des derniers mois de 1934. D'un autre côté l'accélération de la production de marchandises de consommation a été à peu près continue au cours de l'année.

### Sidérurgie

La production de fer et d'acier est un excellent baromètre du groupe produisant de l'outillage et de l'équipement. Le fer et l'acier sont d'usage général dans la production, le renouvellement

des voies ferrées et de leur matériel roulant ainsi que de l'outillage industriel, ce qui explique la position stratégique occupée par cette industrie dans le mesurage des fluctuations cycliques. La production de fonte en gueuse les onze premiers mois de 1934 est de 364,631 tonnes longues, comparativement à 190,464 la même période de 1933, un gain de 91.4 p.c.

La production d'acier en loupes à 700,187 tonnes longues montre une augmentation de 95.4 p.c.

L'indice de la production d'acier à 98.0 est plus haut qu'en toute année depuis 1930 et la production de fonte en gueuse montre un gain sur 1932 et 1933.

Les importations de fer et d'acier, ouvrés ou non, les onze premiers mois de l'année donnent \$86,750,000, un gain de 56.3 p.c. sur 1933.

#### Production d'automobiles

Il est admis que les fluctuations de l'industrie de l'automobile correspondent en général avec le pouvoir d'achat. Un fort pouvoir d'achat provoque l'expansion des ventes tandis que le manque de demande, comme dans les temps de dépression, a pour effet de les contracter rapidement. La vulgarisation de l'automobile a été l'un des traits les plus frappants de la décade qui a suivi la guerre et elle a été une influence puissante sur la capacité productive. La grande popularité de l'automobile au Canada est prouvée par le fait qu'en 1933 il y avait 1,083,000 voitures enregistrées.

La production d'automobiles les onze premiers mois de 1934 se chiffre à 114,158, un gain de 82.2 p.c. sur la même période de 1933. L'expansion de la production d'automobiles a stimulé l'activité dans la production des matières premières et d'accessoires. Les industries des bandages et du pétrole ont été affectées adversément par la dépression, mais l'expansion de l'automobilisme en 1934 a eu un effet bienfaisant sur ces deux industries. Les importations de caoutchouc brut, à 57,321,000 livres les premiers onze mois de 1934, montrent un gain de près de 46 p.c. sur la même période de 1933. Le gain des importations de pétrole brut, indiquant la situation dans l'industrie des huiles, à 1,027,500,000 gallons, est de 15.5 p.c.

#### Construction

L'industrie du bâtiment est généralement considérée comme d'une grande valeur barométrique. Au cours d'une dépression, les outillages et équipements, généralement parlant, sont plus que suffisants pour répondre à la demande de produits industriels. Une fois que l'outillage-capital fixe est exploité à un fort pourcentage de sa capacité correspondant à l'état des affaires au cours de la période précédente de plus grande prospérité, l'industrie du bâtiment en ressent immédiatement une grande impulsion. Le niveau élevé des opérations de 1927 à 1929, comme on le voit par la valeur des contrats qui dépasse \$400,000,000 par année, illustre bien la corrélation de l'industrie avec le progrès économique. Le déclin dans la construction de 1929 à 1933 a coïncidé avec le retour d'une dépression majeure.

Alors que les contrats, à \$125,812,000, montrent un gain de 29.3 p.c. sur l'année précédente, l'industrie était à un niveau plutôt bas comparativement aux années 1923-1929. Les permis de bâtir les onze premiers mois donnent une valeur de \$24,300,000 comparativement à \$19,793,000 les mêmes mois de 1933, un gain de près de 23 p.c.

#### Energie électrique

Bien qu'aucune usine électrique de grande envergure n'ait été commencée en 1934, on a continué les travaux sur plusieurs aménagements déjà en construction. Comme résultat, de nouvelles installations, environ 214,965 h.p., ont été ajoutées à la capacité des usines canadiennes au cours de l'année. En conséquence, les installations de tout le Dominion à la fin de 1934 atteignent une capacité de 7,547,000 h.p. L'augmentation de 1934 provient en grande partie de l'achèvement des usines du Rapide Blanc, de la compagnie Shawinigan Water and Power, sur le Saint-Maurice, et de l'installation d'une unité additionnelle à la Beauharnois. D'autres installations de moindre importance ont été complétées en Colombie-Britannique, en Ontario et en Nouvelle-Ecosse.

La production d'énergie électrique les onze premiers mois de 1934 est de 19,089,000,000 kilowatt-heure, un gain de 20.5 p.c. sur les mêmes mois de l'année précédente. L'augmentation sur 1930, maximum antérieur, est d'environ 17 p.c.

Même après déduction des exportations et livraisons aux chaudières à vapeur, la production des onze premiers mois de 1934 a touché son plus haut point dans l'histoire de l'industrie, le gain sur 1930, après cette déduction, étant d'environ 3.5 p.c. Le gain de 1934 a été général, mais plus prononcé dans la province de Québec que partout ailleurs.

### Production minérale

La valeur de la production minérale en 1934 surpasse non seulement celle de l'année précédente mais encore celle de toute autre année dans l'histoire de l'industrie, excepté 1929 et 1930. Cette valeur est estimée à \$278,337,000 en 1934, une augmentation de 26 p.c. sur la production de l'année précédente, à \$221,495,000. Les augmentations les plus frappantes sont dans les métaux où plusieurs records nouveaux ont été établis. La production d'or a dépassé en valeur tous les précédents, donnant en fonds canadiens \$102,242,000 comparativement à \$84,350,000 l'année précédente. Le prix moyen de l'or a été de \$34.49 par once fine, comparativement à \$28.60 en 1933.

La production de cuivre à 367,000,000 de livres est un record, dépassant 1930 de 21 p.c. La valeur de cette production est de \$26,881,000 comparativement à \$37,948,000 en 1930.

La production de nickel, à 130,346,000 livres, donne une augmentation de 56 p.c. sur 1933 et de 18 p.c. sur 1929. La production de plomb, à 342,811,000 livres, montre une augmentation de 29 p.c. sur 1933 et dépasse tout précédent. La production de zinc, à 300,747,000 livres, est de 51 p.c. plus forte que celle de 1933 et de 12 p.c. que celle de 1930, le maximum antérieur.

La production de charbon est de 13,891,000 tonnes longues, un gain de 16.7 p.c. sur les 11,903,000 tonnes longues de 1933. La production de ciment est évaluée à \$5,729,000 comparativement à \$4,537,000.

### La situation agricole

La production et la valeur des principales récoltes sont les principaux facteurs contribuant à l'expansion ou à la contraction de l'entreprise industrielle. Dans un pays comme le Canada où l'agriculture occupe une large place dans les activités économiques de la nation, il est inévitable que les récoltes affectent la tendance générale des affaires. La récolte de blé n'a été que légèrement supérieure à celle de 1933, le rendement à l'acre étant de 11.5 boisseaux comparativement à 10.4. Vu des prix considérablement plus élevés l'avance en valeur de la récolte de blé a été dans des proportions appréciables, donnant un total de \$159,455,000 comparativement à \$122,864,000.

L'estimation préliminaire de la valeur de toutes les récoltes de 1934, à \$536,498,600, est un gain de \$112,902,000 sur la valeur correspondante de 1933. Cette augmentation provient en plus grande partie d'une plus value de \$37 millions en foin et trèfle, de \$36½ millions en blé, \$31 millions en avoine et \$10½ millions en orge.

Les livraisons de blé du 1er août au 30 septembre 1934 donnent 161 millions de boisseaux comparativement à 151 millions de boisseaux la même période de l'année précédente. Les stocks visibles de blé canadien le 28 décembre 1934 sont de 258 millions de boisseaux comparativement à 242 millions à la même date de 1933. Les exportations de blé canadien se chiffrent à 73 millions de boisseaux au cours des quatre mois d'août à novembre comparativement à 75 millions pour les mêmes mois de l'année précédente. Le prix moyen au comptant du blé Nord No 1, à Winnipeg, a été 81.5 cents le boisseau d'août à novembre 1934, comparativement à 86.3 cents la même période de 1933, un gain de 23 p.c.

### Chemins de fer et navigation

Il y a un gain appréciable dans les transports commerciaux des chemins de fer du Canada en 1934. L'augmentation dans le mouvement des marchandises a été de près de 15 p.c., les chargements se chiffrent à 2,320,000 wagonnées comparativement à 2,032,000 en 1933. Il y a aussi une augmentation considérable sur 1932. Les chargements de grain et de coke ont été plus légers qu'en 1933 mais tous les autres groupes de la classification officielle accusent des avances.

Le gain en revenus bruts des lignes canadiennes du Canadien-National, les onze premiers mois de 1934, est de 11.5 p.c. tandis que celui du C.P.R. est de 10.4 p.c.

Les cargaisons des vaisseaux ayant visité cinq des principaux ports du Canada: Halifax Saint-John, Québec, Toronto et Vancouver, donnent 11,626,000 tonnes les premiers dix mois de 1934 comparativement à 10,758,000 tonnes la même période de 1933, une augmentation de 8 p.c.

### Commerce extérieur

Le gain prononcé du commerce extérieur a été une des caractéristiques de l'amélioration économique de l'année. Les exportations canadiennes de marchandises les onze premiers mois de 1934 se chiffrent à \$592,000,000 comparativement à \$481,000,000 l'année précédente, une augmentation de \$111,000,000 ou 23.1 p.c. Les exportations de monnaies et lingots, qui ne sont pas comprises avec les marchandises, ont aussi fait une avance remarquable, due en grande partie à un cours plus élevé de l'or en lingots.

La valeur des importations a avancé de \$365,800,000 les onze mois de cette période à \$474,400,000, un gain de 29.7 p.c. La balance favorable du commerce, en tenant compte de

nos exportations d'or nouveau, est de \$124,100,000, une augmentation de 3.2 p.c. sur la même période de 1933.

#### Jauges économiques

Pour juger de la situation actuelle du Canada il faut prendre en considération cinq facteurs d'importance économique s'étendant sur toute la période d'après-guerre et illustrés dans le graphique de la page 15. La relativité de ces facteurs avec le volume physique des affaires et les prix de gros occupe la première position. Les fluctuations des prix des sept années de 1923 à 1929 ont été relativement modérées, la stabilité comparative du niveau encourageant l'expansion commerciale. La stabilité des prix de cette période est en vif contraste avec l'accélération des opérations commerciales. La phase de prospérité du second cycle d'après-guerre est caractérisée par une stabilité relative des prix, bien que le développement normal, en ligne avec les précédents historiques, doit montrer une avance considérable du cours des denrées. L'expansion prononcée du volume des entreprises productives a été le principal élément de prospérité de cette période. Venant à la suite de déclin continu entre 1929 et 1932, les deux années dernières sont caractérisées par une avance simultanée des opérations commerciales et des prix. Un gain plus grand du volume physique des affaires à la fin de l'année a résulté en un niveau relativement plus élevé des affaires que des prix de gros.

#### La situation étrangère

Mesurée par l'information établie dans quinze pays importants, la production industrielle du Canada montre un plus grand relèvement en 1934 que celle de tout autre pays du groupe, excepté l'Allemagne et la Suède. L'indice de la production industrielle au Canada, sur la base de 1928, donne une moyenne de 79.7 les premiers onze mois de 1934 comparativement à 64.6 la même période de l'année précédente, un gain de 23.4 p.c. La Grande-Bretagne, la Suède, l'Allemagne et l'Italie ont aussi fait des gains considérables au cours de l'année. La France et la Belgique ont été moins prospères et le gain des Pays-Bas a été léger. La position de la Pologne s'est grandement améliorée, l'indice montant de 10.4 p.c. L'avance de l'indice des États-Unis se limite à 2.5 p.c. dans cette comparaison. La plupart des industries canadiennes ont montré une activité relativement plus grande au cours de 1934.

La production industrielle de France, bien qu'assez bien maintenue en 1930, a subéquentement subi un déclin marqué. Il y a eu un relèvement prononcé les douze mois terminés avec juillet 1933 et une réaction encore plus caractérisée pour la partie écoulée de 1934. La moyenne de l'indice de la production industrielle en 1934 est de 78.8 comparativement à 84.7 la même période de 1933.

Le point le plus bas de la production industrielle en Grande-Bretagne en ces dernières années a été touché dans les derniers mois de 1931. Les opérations se sont assez bien maintenues à un niveau légèrement plus haut en 1932. Il y a eu avance en 1933, et en 1934 le niveau des affaires a été bien proche de celui de 1929. D'après l'indice de l'activité commerciale, publié par l' "Economist," la Grande-Bretagne est définitivement sortie des pires phases de la dépression.

Alors que les conditions industrielles des États-Unis montrent une amélioration évidente comparativement au niveau de 1932 et le premier trimestre de 1933, les développements des deux dernières années ont été assombrés par de violentes réactions absorbant une très grande partie de l'avance temporaire. L'indice de la production industrielle, transféré sur la base de 1928 pour une comparaison directe, donne en moyenne 70.8 les premiers onze mois de 1934, seulement 2.5 p.c. de plus que les mêmes mois de 1933.

#### Les tendances de décembre

A la suite de cinq dimanches au cours du mois, la production industrielle de décembre a été inférieure à celle du mois précédent, l'indice marquant 91.0 comparativement à 97.0 en novembre. L'indice de la production minérale a décliné à la suite d'une réduction de cuivre, argent et charbon. L'indice de la production manufacturière marque 91.8 comparativement à 96.0. L'indice de la production alimentaire basée sur 10 facteurs a reculé de 96.5 à 91.7. Il y a un gain visible dans les importations de caoutchouc brut et de laine brute, un gain léger dans les importations de coton brut avant ajustement pour variations saisonnières. L'industrie du papier à journal après ajustement a atteint une nouvelle cime dans son histoire. La production primaire de fer et acier a été plus active et l'industrie des automobiles a commencé à travailler sur ses nouveaux modèles. Les importations de pétrole ont baissé vivement. Les contrats de construction ont décliné et la production d'énergie électrique montre une vive expansion. Les importations de marchandises sont à plus bas niveau tandis que les exportations après ajustement montrent une légère avance.

OTTAWA, BUREAU FÉDÉRAL DE LA STATISTIQUE, 21 janvier 1935.

## PUBLICATIONS ISSUED BY THE DOMINION BUREAU OF STATISTICS

### 1. ANNUAL OR SPECIAL REPORTS ISSUED DURING THE MONTH ENDED JANUARY 14, 1935

**Administration.**—Canada, 1935, the official handbook of present conditions and recent progress, 192 p. illus. maps, diagrs. 25 cents; 10 cents to teachers, students and ministers.

**Population.**—Vital Statistics, 1932, 12th annual report, 431 p. \$1.

**Production.**—**AGRICULTURAL PRODUCTS.**—Value of Canadian field crops, 1934, 5 p. The grain situation in the Argentine, December 1, 1934, 5 p. Preliminary report on the grain trade of Canada, crop year 1933-34 (in collaboration with Board of Grain Commissioners) 54 p. **ANIMAL PRODUCTS.**—Report on the leather boot and shoe industry in Canada, 1933, 20 p.
